Proper diagnosis is first step to effective treatment.

The SFMA Level 1 course teaches our movement based diagnostic system and provides healthcare professionals with an efficient and systematic tool to reach a comprehensive movement diagnosis for patients presenting with pain.

This tool allows clinicians to systematically find the cause of pain - not just the source - by logically breaking down dysfunctional movement patterns in a structured, repeatable assessment. The SFMA allows us to identify the correct problems - mobility versus motor control - to best equip clinicians for a successful outcome.

WHAT YOU WILL LEARN

- Efficient, repeatable diagnostic system
- Concept of Regional Interdependence
- How altered motor control can contribute to dysfunction
- Describe how each portion of the Functional Movement System fits together
- Understand the progression of motor control interventions through neurodevelopmental postures.

DATE

September 28-29, 2019

LOCATION

DAS KURHAUS Bad Gleichenberg
Untere Brunnenstraße 33
A-8344 Bad Gleichenberg
