Proper diagnosis is first step to effective treatment.

The SFMA Level 1 course teaches our movement based diagnostic system and provides healthcare professionals with an efficient and systematic tool to reach a comprehensive movement diagnosis for patients presenting with pain.

This tool allows clinicians to systematically find the cause of pain – not just the source – by logically breaking down dysfunctional movement patterns in a structured, repeatable assessment. The SFMA allows us to identify the correct problems – mobility versus motor control – to best equip clinicians for a successful outcome.

WHAT YOU WILL LEARN
- Efficient, repeatable diagnostic system
- Concept of Regional Interdependence
- How altered motor control can contribute to dysfunction
- Describe how each portion of the Functional Movement System fits together
- Understand the progression of motor control interventions through neurodevelopmental postures.
