Proper diagnosis is first step to effective treatment.

The SFMA Level 1 course teaches our movement based diagnostic system and provides healthcare professionals with an efficient and systematic tool to reach a comprehensive movement diagnosis for patients presenting with pain.

This tool allows clinicians to systematically find the cause of pain – not just the source – by logically breaking down dysfunctional movement patterns in a structured, repeatable assessment. The SFMA allows us to identify the correct problems – mobility versus motor control – to best equip clinicians for a successful outcome.

WHAT YOU WILL LEARN

• Efficient, repeatable diagnostic system
• Concept of Regional Interdependence
• How altered motor control can contribute to dysfunction
• Describe how each portion of the Functional Movement System fits together
• Understand the progression of motor control interventions through neurodevelopmental postures.

INSTRUCTOR

Greg Dea

WHEN & WHERE

December 14-15, 2019
Guangzhou, China
